

1. Open the image "astonmartin.png" (or some other suitable image) and select from the menu **modify>canvas>fit canvas** to shrink the transparent background.

2. Ensure image is selected and select **Filters>others>Find Edges**. You should get a darkened lined image similar to above.

3. From the blend mode selection window (in the properties below the images) select **difference**

4. from the menu select **filters > sharpen > sharpen**.

Depending on the image you may need to sharpen again or sharpen more to get the desire effect (experiment and find out, remember you have the undo key).

Remember to save.
